1. Execution provenance

Newman run started 2026-10-27T21:19:48.436000+08:00. The documentation-enriched exported Postman v2.1 collection was executed in its original order against http://127.0.0.1:5051/api/v1 and an isolated prefixed database. The runner creates and removes that API/database.

Evidence	Result
Postman/Newman requests	48 executed; 0 failed
Assertions	63 executed; 0 failed
pytest	52 passed; 0 failures; 0 errors (macOS verification run)
Newman duration	10.82 seconds
Response timing	Mean 138.1 ms; min 8 ms; max 1717 ms. Local test measurements only.

Commands: python -m scripts.run_postman; python -m pytest -q -p no:cacheprovider --junitxml=runtime/assessment-audit-pytest.xml. The pytest run used the updated code on macOS with an isolated MongoDB database. The Newman console below is from an earlier isolated run; the Postman desktop Runner screenshot is supplied separately.

2. Complete connected Postman run

Request	HTTP	Assertions	Outcome

PASS - HTTP 200

PASS - OpenAPI version

4. Supporting pytest results

These are 52 collected cases, including parameterized variants; they are not 51 distinct end-to-end business processes. They use real MongoDB in unique temporary databases and do not reset the shared research database.

Case	Time / s	Outcome
test_health_and_errors	0.689	PASS

test_optimistic_concurrency	0.521	PASS
test_statistics_model_selection_and_age_groups	0.542	PASS

5. Coverage interpretation

Covered scenarios include token revocation/expiration, inactive registration, role approval, sample and embedded CRUD, owner/author checks, cross-parent IDs, incorrect types/ranges, duplicate values, search escaping, pagination/filtering, latest/paired aggregation, private-record exclusion, derived-age recalculation and optimistic version checks.

Some Postman assertions check HTTP status only; pytest supplies additional business-value assertions. No exhaustive exit-path, line/branch coverage, load capacity or clinical validation is claimed. The collection is available for reproduction. A native Postman 12.34.1 Runner screenshot is supplied separately; it shows 63 passing tests and zero failures.

6. Genuine Newman command-line printout

Original terminal output, rendered as text. This is Newman executing a Postman collection; it is not a fabricated desktop screenshot. Runtime database IDs and JWTs are not included.

```
(node:28928) [DEP0176] DeprecationWarning: fs.F_OK is deprecated, use fs.constants.F_OK instead
(Use `node.EXE --trace-deprecation ...` to show where the warning was created)

7. Native Postman Runner screenshot

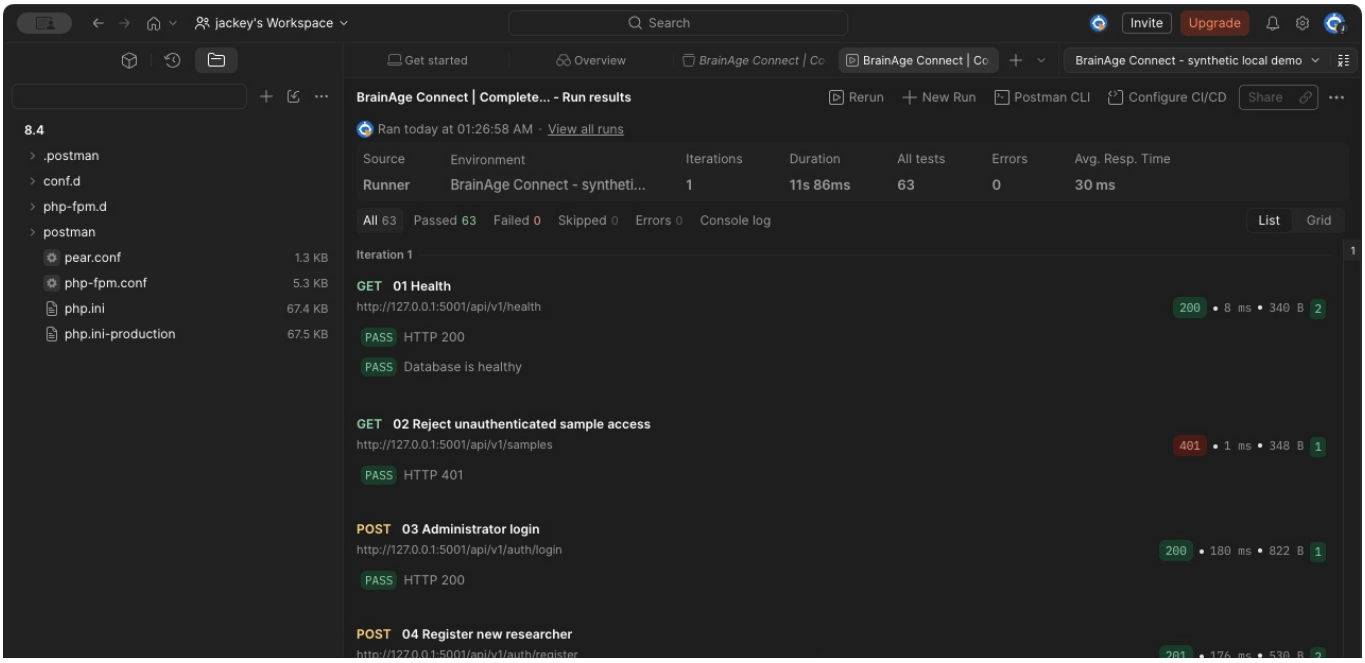

Figure 1. Genuine Postman 12.34.1 desktop Runner on 28 October 2026. The pointer-free displayed portion reports 63 passed assertions, 0 failed and 0 errors in one iteration against the synthetic local environment. Visible requests include health (200), expected unauthenticated rejection (401), administrator login (200) and registration (201). Only the lower edge of the original screenshot is masked to exclude the mouse pointer; no result values were changed. The full 48-request sequence and 63 outcomes are recorded above and in the original Postman 2 result JSON.
